

### **Do Plants Enjoy Humidity? - Low Humidity Areas**

Cactus plants enjoy living in humidity levels of approximately 30%, while tropical plants enjoy at least 90% humidity. One can assist these desirable conditions for plants by placing humidifiers indoors or simply by keeping their plants moist with a spray bottle. At home, it's simple to do this on a daily basis, and also inside an office environment. One simply has to keep in mind to spray the plants often.
